-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Objections***

1. Claim 47 objected to under 37 CFR 1.75 as being a substantial duplicate of claim 46.

When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

### ***Drawings***

2. The drawings are objected to because in figs. 6, 7, 8, inside of the reference numerals 600, 604, 606, 608, 610 612, 620, 702, 704, 710, 810 is illegible. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application.

### ***Allowable Subject Matter***

3. Claims 1-46 and 48-49 allowed.

4. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, Prior art fails to disclose a method for transferring a data flow according to a multi-layer protocol including an application layer in which an application is executing, wherein the physical connection is not released during an inactive period in which there is no data to be transmitted between active transfer periods, but is released when the set up

of the physical connection is signaled from the application layer to the lower level layer in combination with other limitations set forth in the respective claim.

Regarding claim 6, Prior art fails to disclose a method for transferring a data flow according to a multi-layer protocol including an application layer in which an application is executing, wherein the physical connection is not released during an inactive period if the application executing in the application layer is determined to be a specific traffic type application in combination with other limitations set forth in the respective claim.

Regarding claims 9 and 34, Prior art fails to disclose the method being further characterized in that the radio service is GPRS and further characterized in that if the application executing in the application layer transfers specific traffic type data, the application notifies GPRS protocol in order to set up a TBF of a special type that will not be released if an inactive period occurs that is less than a predetermined amount in combination with other limitations set forth in the respective claims.

Regarding claim 46, Prior art fails to disclose the method being further characterized in that the application executing in the application layer generates a special format data packet that designates that the physical connection is not to be released upon the occurrence of an inactive period less than predetermined amount, further characterized in that the data packets generated by the application are observed by a special protocol (snopper) such that if the special format data packet is observed, a special type of TBF is set up in combination with other limitation set forth in the respective claim.
